

User Story Template

1. Title:
2. Priority:
3. User Story: In the user story one should define specific steps that needs to be completed and who is responsible for each of them. <i>As a [type of user]</i> <i>I want to [perform some task]</i> <i>So that I can [achieve some goal]</i>
4. Acceptance Criteria: <i>Given that [some context]</i> <i>When [some action is carried out]</i> <i>Then [a set of observable outcomes should occur]</i>

Sample User Story

1. Title: Parse and extract relevant data from uploaded resumes
2. Priority: Highest
3. User Story: In the user story one should define specific steps that need to be completed and who is responsible for each of them. As a HR manager/recruiter I want to upload a number of resumes in various formats, such as PDF, DOCX, etc. - The system should accurately parse and extract key information, Personal information, Education, Work experience, Skills, Certifications, etc. - The output should be structured format and displayed - The information will be saved to our HR system So that I can quickly review the applicant's qualifications and compare them with job requirements without manually reading through each resume.
4. Acceptance Criteria: - The systems should parse each CV in less than 5 seconds - The outcome should be 90% accurate - If the resume is in the image I can compromise on quality. However, I will not compromise on the not less than 20% of the resumes
